

28th Annual International Munich Paper Symposium – IMPS

Munich, Germany, March 27-29, 2019

For the 28th time, the major annual European conference in paper technology, the IMPS – International Munich Paper Symposium, is going to take place in the modern Sheraton Munich Arbellapark Conference Center on March 27-29, 2019.

The symposium is a technical conference and always focused on topics related to the paper and board manufacturing and supply industry, with an unusually high number of field reports from the mills. It is intended to provide an international platform for people working in the field of board and paper industry. In contrast to many larger conferences, the IMPS intentionally hosts no more than about 400 participants in order to maintain the personal first class atmosphere, for which it is known. With a quarter century of success in knowledge transfer, the International Munich Paper Symposium is one of the most significant international technical conferences for the paper and board industry in central Europe.

The most current information – with online registration – is available on our homepage at www.paper-online.de.

27th Annual International Conference on Composites or Nano Engineering – ICCE-27

Granada, Spain, July 14-20, 2019

Co-sponsored by the University of Granada, Spain, the conference welcomes contributions from all areas of materials science, nanoscience and nanoengineering, chemistry and physics, energy and biomedical science and engineering.

ICCE-27 Granada will focus on “Linking Nano Technology with Composites Technology”, and will have special sessions on transportation, manufacturing technology, energy technology, bio/medical technology, and emerging materials technology, safety engineering, durability of infrastructures, and Timoshenko mechanics.

Further details regarding the conference are available at www.icce-nano.org.
